

GREEN GOLD ITALIAN RYEGRASS

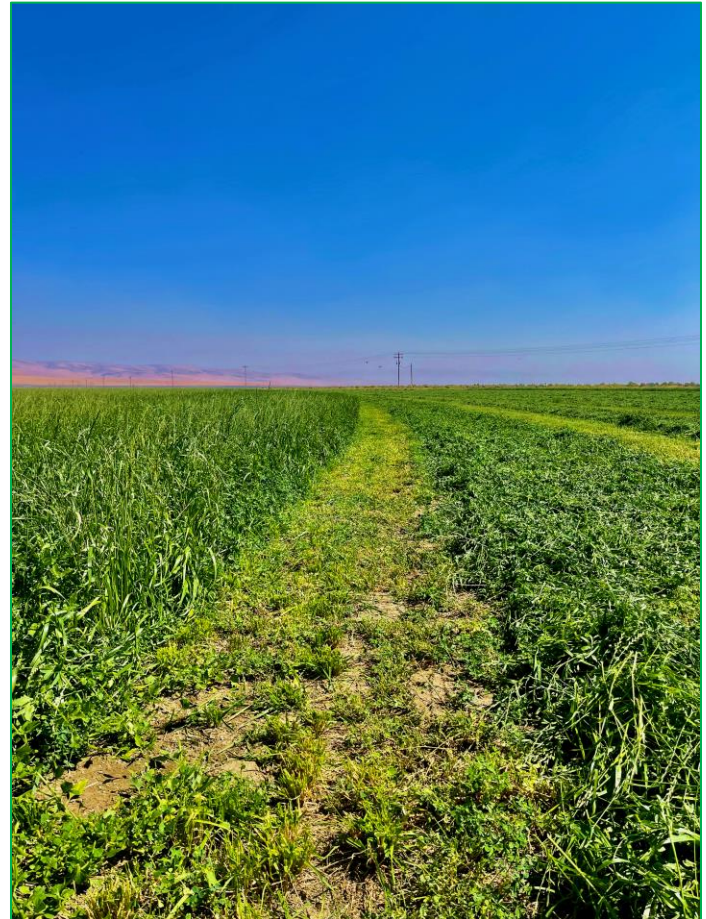

PERFORMANCE, WHEN IT COUNTS!

GREEN GOLD is a special blend of our best Diploid & Tetraploid Italian Ryegrasses that produce high-yielding and high-quality forage. The Diploids provide increased traffic-tolerance and disease-resistance, while the Tetraploids provide higher yields and increased digestibility.

GREEN GOLD has superior winter-hardiness and will not likely head out in its first season if planted in the spring. Spring plantings will increase the yield and longevity of the stand, which can last for 2 years.

GREEN GOLD can be inter-seeded into winter-killed or thinning alfalfa stands to increase yield & forage quality. Suggested planting time is immediately following the last major frost.

GREEN GOLD is also recommended for thickening up older pastures and adding to forage mixes and forage grains for increased palatability and yield.

Rapid Establishment

Excellent Summer Growth

Superior Forage Quality

<u>Growth Habit</u>	<u>Estab. Rate Days</u>	<u>Nitrogen Required</u>	<u>pH Range</u>	<u>Dry Matter Yield Tons</u>	<u>Re-Growth</u>	<u>Pure Stand Seeding Rate</u>	<u>Inter-Seeding Rate</u>
